

Accessing data from the Internet network is a basic need of any company. Its presence in the digital environment is absolutely necessary for any entity activity. Viva Telecom offers its customers internet access services with a minimum capacity guaranteed, both to destinations from the metropolitan network, as well as to destinations on the internet - 1:1 symmetric capacity for uploads and downloads , as well as customized technical support for every customer.

Services provided by Viva Telecom are of premium type, and the main focus of the company is represented by the post-sale relationship and technical and commercial support provided. Viva Telecom support means, as a matter of fact, the adaptation of the technical team to each customer and its answer to any customer needs.

- ❖ Connections used for the provision of the services may be offered on optical media, on fiber-optic and copper terrestrial support, or on wi-fi, wi-max 3G and 4G radio support. Thanks to the support transmission variants, Viva Telecom provides fast internet connection, at minimum costs.
