

Viva Telecom offers its customers Carrier Selection Code(CSC), which can make phone calls from your landline appliances in Romtelecom/ Telekom to international mobile networks to substantially reduced tariffs compared with those of Romtelecom/ Telekom network. The advantage of this service consists in maintaining existing phone numbers already assigned to the operator and receiving calls, without changing the supplier and at no additional cost. The connection method is dedicated and can only be accessed on Romtelecom/Telekom infrastructure..

- ❖ Using the new access mode allows the call by typing the 1671 code, followed immediately by the called number, without any break needed or awaiting a midtone. Use of the service can be made by direct code formation, using a device type "dialer" or programming the dialling, where this solution is allowed..
