

Viva Telecom provides its customers with leased line circuits which include all patterns of signalling circuits, which may link two offices. Among types of leased lines usually offered to its customers, there are the E1, E3, T1, STM circuits. This type of service is designed for companies that have registered offices in different geographic areas - at national level, and want transport services dedicated to applications and proprietary equipment. . The National Leaset Line Circuit Service provides a permanent connection between the two points that can be used symmetrically for services of voice and data.

- ❖ These circuits provide the highest level of security of data transfer. Due to structural features, this service has operating costs higher than Layer 2 and Layer 3 circuits.

AVANTAJE ȘI BENEFICII:

- ✓ Guaranteed bandwidth
